

COMPUTER NETWORKS

Network Fundamentals

A computer network is a collection of interconnected devices that communicate with each other. Networks allow devices to s

Network Devices

Network devices are hardware components that help devices communicate over a network. Common network devices inclu

Switches connect devices within a local network. A switch uses MAC addresses to forward data to the appropriate device.

Routers connect different networks and forward packets between them. Routers use IP addresses to determine where pack

Network Protocols

Network protocols are rules that define how devices communicate over a network. Protocols allow devices to exchange data

Examples of network protocols include HTTP, HTTPS, TCP, UDP, and IP.

Network Architecture

Network architecture describes how network components are organized and how they communicate. Common approaches
